

Frontend — Google Sign-In Update

New Client ID · Netlify env · redeploy checklist

NL-FE-GGL-002 · 5 October 2026

Live FE: <https://nexuslexis.netlify.app>

1. Why this doc

Backend rotated Google OAuth to a new Cloud project. Frontend must switch VITE_GOOGLE_CLIENT_ID and redeploy Netlify. Old Client ID (540754283524-...) must be removed.

2. Required Netlify env

```
VITE_GOOGLE_CLIENT_ID=925512874310-duojhjmbpllioee0mq1gm532f0gmq40g.apps.googleusercontent.com
VITE_AUTH_API_URL=https://nexus-lexis-backend-45v4.vercel.app/api/auth
VITE_API_BASE_URL=https://nexus-lexis-backend-ql8w.vercel.app/api/v2
VITE_LEX_API_BASE_URL=https://nexus-lexis-backend-ql8w.vercel.app/api/v1/lex
```

After saving env → Redeploy Netlify. No Client Secret on frontend.

3. API (usually no code change)

```
POST {VITE_AUTH_API_URL}/google/token
Content-Type: application/json

{ "idToken": "<Google credential>", "role": "client" }
// role: client | lawyer | ca
// "credential" also accepted instead of idToken
```

Store accessToken + refreshToken → open dashboard.

4. Errors

Error	Fix
origin_mismatch	Add https://nexuslexis.netlify.app to Google JS origins (no /)
API fail after Google popup	FE still on old Client ID — update env + redeploy
Google sign-in is not configured	Auth Vercel missing GOOGLE_CLIENT_ID

5. Checklist

Check	Owner
New VITE_GOOGLE_CLIENT_ID on Netlify	Frontend
Netlify redeploy after env change	Frontend
Login Google works on netlify.app	Frontend
Auth Vercel has matching Client ID/Secret	Backend (done)
